# T OIL FILTERS

COMMERCIAL SHEET

OIL MIST AND DUST

## SUPPLY

- T OIL SERIES FILTERS
- PRE-CHAMBER
- GALVANISED PERIMETER PANELLING
- MULTISTAGE PREFILTERS
- STANDARD COLOUR RAL 7016

## ACCESSORIES/OPTIONAL

- ELECTRIC PANEL
- ELECTRIC FAN
- AUTOMATIC OIL DRAIN
- CUSTOM COLOURING

## DESCRIPTION

The FAMA T series filter units are compact units with high efficiency, specially designed for the elimination of vapours and oil mists.

The system consists of two types of pre-filtration: one gravitational, obtained by changing the air speed inside the stilling chamber with flow deflectors, the second consisting of metal mesh filters, which are used to concentrate the oily vapours. This is followed by a filtration stage with soft fibreglass pockets with high filtration efficiency, particularly designed and continuously tested for the filtration of oily vapours and, as last and fourth stage, rigid pocket filters in category F9/H13.
